

ABSTRACT OF THE DISCLOSURE

An image processing apparatus includes an image attribute determining unit that determines an image attribute of an image data, an object dissolving unit that dissolves the image data into a plurality of objects based on the image attribute, and an object describing unit that describes the objects in predetermined formats and converts the objects into a file of a predetermined file format. The object describing unit describes an object having a predetermined image attribute among the objects by associating an additional object representing information on the predetermined image attribute with the object.
